-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 19 June 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-24 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-24 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date 6/19/03.

- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

35 U.S.C. 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 and 12-24 are rejected under 35 U.S.C. 102(b) as being unpatentable over Olnowich et al. (U.S. Patent No. 5,734,826).

With respect to claim 1, the Olnowich et al. reference teaches a plurality of CRC calculation blocks, each of the plurality of CRC calculation blocks performing a CRC calculation to yield a value of an n-bit CRC result (column 7, lines 18-23) and (column 8, lines 4-19); a switch for selectively passing one of the CRC calculation values (column 3, line 27 – column 4, line 7); a CRC register for latching the one of the CRC calculation values selectively passed by the switch (column 16, line 64 - column 17, line 31) and (column 18, line 39 - column 19, line 9).

With respect to claim 2, the Olnowich et al. reference teaches wherein the latched CRC calculation value is inverted (column 18, line 67 – column 19, line 9).

With respect to claim 3, the Olnowich et al. reference teaches wherein the latched CRC calculation value is feedback to the plurality of CRC calculation blocks (column 17, lines 22-31) and (column 18, lines 58-67).

With respect to claim 4, the Olnowich et al. reference teaches wherein the plurality of CRC calculation blocks receives a data input (column 9, lines 56-62) and (column 15, lines 30-53).

With respect to claim 5, the Olnowich et al. reference teaches wherein the data input is in the form of one or more eight bit bytes (column 6, lines 49-58).

With respect to claim 6, the Olnowich et al. reference teaches wherein each of the plurality of CRC calculation blocks receives a different number of eight bit bytes from the data input (column 6, lines 49-58).

With respect to claim 7, the Olnowich et al. reference teaches wherein each of the plurality of CRC calculation blocks use a 32 bit CRC polynomial (column 7, lines 21-32).

With respect to claim 8, the Olnowich et al. reference teaches wherein each of the plurality of CRC calculation blocks uses the same 32 bit CRC polynomial (column 7, lines 21-32).

With respect to claim 12, the Olnowich et al. reference teaches wherein the 32 bit polynomial is loadable into the circuit (column 14, lines 29-30) and (column 14, lines 46-55).

With respect to claim 13, the Olnowich et al. reference teaches wherein the 32 bit polynomial is built into the circuit (column 4, lines 11-24).

With respect to claim 14, the Olnowich et al. reference teaches inputting a variable width data word (column 2, lines 14-21); calculating a first CRC value using the variable width data word and calculating a second CRC value using the variable width data word, wherein the first and second CRC value calculation occur in parallel (column 15, line 66 – column 16, line 54).

With respect to claim 15, the Olnowich et al. reference teaches wherein the variable width data word is 32 bits long (column 7, lines 21-32).

With respect to claim 16, the Olnowich et al. reference teaches wherein the second CRC value is calculated using a portion of the variable width data word that is not used in the calculation of the first CRC value (column 16, lines 11-32).

With respect to claim 17, the Olnowich et al. reference teaches wherein the second CRC value is calculated using a portion of the variable width data word that is used in the calculation of the first CRC value (column 16, lines 11-32).

With respect to claim 18, the Olnowich et al. reference teaches selecting one of the first and second CRC values as the CRC output value (column 16, lines 21-50).

With respect to claim 19, the Olnowich et al. reference teaches feeding back the CRC output value as an input for the calculation of the first and second CRC values (column 16, lines 51-54).

With respect to claim 20, the Olnowich et al. reference teaches wherein the switch selection signal is a multi-bit value (column 16, lines 11-20).

With respect to claim 21, the Olnowich et al. reference teaches wherein the switch selection signal is a multi-bit value (column 17, lines 22-31).

With respect to claim 22, the Olnowich et al. reference teaches wherein the multi-bit value is decoded to provide a four bit value to a mux that performs the selection of the one of the first and second CRC values (column 17, lines 21-31).

With respect to claim 23, the Olnowich et al. reference teaches wherein the CRC output value is latched after being output by the mux and the latched CRC output value is feedback (column 16, line 64 – column 17, line 10).

With respect to claim 24, the Olnowich et al. reference teaches wherein the CRC output value is inverted (column 18, line 67 – column 19, line 9).

35 U.S.C. 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Olnowich et al. (U.S. Patent No. 5,734,826) in view of Yang et al. (U.S. Patent No. 6,701,478).

With respect to claim 9, all of the limitations of claim 8 have been addressed. The Olnowich et al. reference does not teach wherein the 32 bit CRC polynomial is for ethernet. The Yang et al. reference teaches wherein the 32 bit CRC polynomial is for ethernet (column 3, lines 9 – 14). Thus it would have been obvious to one of ordinary skill in the art at the time of the invention was made to have combined the references Olnowich et al. and Yang et al. to incorporate wherein the 32 bit CRC polynomial is for ethernet into the claimed invention. The motivation for wherein the 32 bit CRC polynomial is for ethernet is for good error detection capabilities, and requires relatively little overhead (column 1, lines 42-43 – Yang et al. reference).

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Olnowich et al. (U.S. Patent No. 5,734,826) in view of Yamazaki et al. (U.S. Patent No. 6,487,686).

With respect to claim 10, all of the limitations of claim 5 have been addressed. The Olnowich et al. reference does not teach wherein there are sixteen CRC calculation blocks including the first and second CRC calculation blocks. The Yamazaki et al. reference teaches wherein there are sixteen CRC calculation blocks including the first and second CRC calculation blocks (column 5, lines 16-23) and (column 5, lines 35-42). Thus it would have been obvious to one of ordinary skill in the art at the time of the invention to have combined the references Olnowich et al. and Yamazaki et al. to incorporate wherein there are sixteen CRC calculation blocks including the first and

second CRC calculation blocks into the claimed invention. The motivation for wherein there are sixteen CRC calculation blocks including the first and second CRC calculation blocks is so it would be possible to check an improvement of an error rate achieved by using the FEC error-correcting code (column 2, lines 12-14 – Yamazaki et al. reference).

Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Olnowich et al. (U.S. Patent No. 5,734,826) in view of Abbott (U.S. Patent No. 6,351,142).

With respect to claim 11, all of the limitations of claim 1 have been addressed. The Olnowich et al. reference does not teach wherein the circuit is implemented as a field programmable gate array. The Abbott reference teaches wherein the circuit is implemented as a field programmable gate array (column 2, lines 9-29). Thus it would have been obvious to one of ordinary skill in the art at the time of the invention to have combined the references Olnowich et al. and Abbott to incorporate wherein the circuit is implemented as a field programmable gate array into the claimed invention. The motivation for wherein the circuit is implemented as a field programmable gate array so that the operations can be done at a lower, and more economical, clock rate (column 2, lines 27-29 - Abbott reference).

Application/Control Number:
10/601,175
Art Unit: 2112
